6291.0.55.003 - Labour Force, Australia, Detailed, Quarterly, Aug 2014

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 18/09/2014

Summary

Main Features

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

Changes in this and upcoming labour force issues

CHANGES IN THIS AND UPCOMING LABOUR FORCE ISSUES

CHANGES TO LABOUR FORCE OUTPUTS

As advised in previous issues, changes to standard Labour Force products will be implemented from the July 2014 to May 2015 issues of this and related releases. These changes have arisen from the ABS review in 2010-11 of content included in the labour household survey program, as described in the Information Paper: Outcomes of the Labour Household Surveys Content Review, 2012 (cat. no. 6107.0).

There have not been any changes to the format of the pdf, spreadsheets or data cube in this issue. However, changes have already been made to the related detailed monthly and quarterly releases and further changes to all releases are planned.

The following changes have already been made to the detailed monthly and quarterly Labour Force releases:

Products produced for the final time with the June 2014 issue of the detailed monthly

Labour Force release (cat. no. 6291.0.55.001) and not available with future issues are:

- Spreadsheet tables 15a and 15b;
- Data cube EM2 this will be replaced by two separate data cubes from the January 2015 issue;
- Data cube UM1;
- Data cube RM2.
- Products produced for the final time with the May 2014 issue of the detailed quarterly Labour Force release (cat. no. 6291.0.55.003) and not available with future issues are:
 - Spreadsheet table 18 this was previously highlighted to be removed from the November 2014 issue;
 - Data cube EO1;
 - Data cube UQ1 this was previously highlighted to be removed from the November 2014 issue;
 - Data cube UQ2 this will be replaced by two separate data cubes from the November 2014 issue;
 - Data cube UQ3 this will be replaced by two separate data cubes from the November 2014 issue.

These products have been ceased due to:

- duration of unemployment since last full-time job no longer being collected as this item was replaced by duration of unemployment in 2001 and is therefore obsolete (Spreadsheet tables 15a and 15b; Data cubes UM1 and RM2),
- changed response categories for unemployed persons regarding their reasons for unemployment, and
- expanded scope and changed response categories for employed persons who worked fewer than their usual number of hours during the reference week (Data cube EM2 which will be replaced, and Data cube EO1 for which the information will largely be available in other products).

Further information on changes to outputs is available in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), released on 26 June 2014.

The ABS changed the measurement of the duration of a person' period of unemployment from July 2014. This change only applies to those persons already identified as unemployed and does not impact on the number of unemployed persons. Previously, the duration of a person' period of unemployment could only end with a spell of work of two weeks or more. This was inconsistent with the definition of employment which recognises any work of one hour or more during the reference week. From July 2014 the ABS will ask when a person last worked (in paid employment of one hour or more). This is both consistent with the definitions of employment and unemployment as well as international standards. The data impacted by this change is only released in the detailed monthly Labour Force release (cat. no. 6291.0.55.001).

Also in July 2014 the ABS refined some of the questions used to determine if a person is actively looking for work. From time to time the ABS updates these questions to ensure alignment with international standards and to reflect the changing way that people look for work in Australia. For details of the changes made in July see 6202.0 - Labour Force, Australia, Jul 2014. There is no evidence that these changes had a significant impact on the July 2014 estimates of unemployed persons.

The ABS planned to implement changes to the pdf, spreadsheets and data cubes in this publication and in the detailed monthly Labour Force release (cat. no. 6291.0.55.001) from the September issues, with blank templates of the new spreadsheets and datacubes to be released with the August issues. To allow further time for validation, the changes to these releases will be delayed one month and implemented with the October issues of this publication and the detailed monthly Labour Force release. The changes to the detailed quarterly Labour Force release will be implemented with the November issue as planned. To give clients additional time to prepare for these changes, the blank templates of the new spreadsheets and datacubes will be released on 25 September as a supplement to this publication, and the detailed monthly and quarterly Labour Force releases. At the same time the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0) will be updated to clarify changes being made.

As a result of delaying the introduction of the new monthly outputs from the September to October issues, quarterly rebenchmarking (which revises estimates to reflect the latest Estimated Resident Population) planned for the October 2014 issue will be deferred. The timing of the quarterly rebenchmarking will be advised on 25 September when the dummy products and updated information paper are released.

Article Archive

This section provides an archive of articles and analysis published in Labour Force, Australia (cat. no. 6202.0), promoting the effective use of labour force statistics. Articles are sorted by publication date.

Articles on labour related topics are also available in Australian Labour Market Statistics (cat. no. 6105.0) and Australian Social Trends (cat. no. 4102.0).

About this Release

A range of quarterly Excel spreadsheets and SuperTABLE datacubes. The spreadsheets contain broad level data covering all the major items of the Labour Force Survey in time series format, including seasonally adjusted and trend estimates. The datacubes contain more detailed and cross classified original data than the spreadsheets.

History of Changes

This document was added or updated on 16/10/2014.

13/11/2014 - Table 4 "Employed persons by Industry - Trend, Seasonally adjusted, Original" has revised seasonally adjusted and trend data for August 2014. As advised in the October 2014 issue of *Labour Force, Australia* (cat. no. 6202.0), the seasonality of the labour force data has been re-estimated after taking account of the changed pattern of supplementary surveys. This will result in revised seasonally adjusted (and trend) estimates for July, August and September 2014 for all series.

16/10/2014 - Table 4 "Employed persons by Industry - Trend, Seasonally adjusted, Original" has revised seasonally adjusted and trend data for August 2014. As advised in the September 2014 issue of *Labour Force, Australia* (cat. no. 6202.0), the seasonal pattern previously evident for the July, August and September labour force estimates is not apparent in 2014. As there is little evidence of seasonality in these months for 2014, the ABS has decided that for these months the seasonal factors will be set to one (other than for

the monthly aggregate hours worked series). This will result in revised seasonally adjusted (and trend) estimates for July and August 2014 for all series.

Explanatory Notes

Explanatory Notes

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

Quality Declaration - Summary

QUALITY DECLARATION - SUMMARY

INSTITUTIONAL ENVIRONMENT

Labour Force statistics are compiled from the Labour Force Survey which is conducted each month throughout Australia as part of the Australian Bureau of Statistics (ABS) household survey program. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

RELEVANCE

The Labour Force Survey provides monthly information about the labour market activity of Australia's resident civilian population aged 15 years and over. The Labour Force Survey is designed to primarily provide estimates of employment and unemployment for the whole of Australia and, secondarily, for each state and territory.

TIMELINESS

The Labour Force Survey enumeration begins on the Sunday between the 5th and 11th of the month, except for the Christmas and New Year holiday period. In December enumerations starts between the 3rd and 9th (4 weeks after November enumeration

begins). In January enumeration starts between the 7th and 13th (5 weeks after December enumeration begins).

Key estimates from the Labour Force Survey are published in two stages. The first, Labour Force, Australia (cat. no. 6202.0), is released 32 days after the commencement of enumeration for the month, with the exception of estimates for December which are published 39 days after the commencement of enumeration.

The second stage includes detailed data that were not part of the first stage and are published in Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003). The second stage is released 7 days after the first stage.

ACCURACY

The Labour Force Survey is based on a sample of private dwellings (approximately 26,000 houses, flats etc) and non-private dwellings, such as hotels and motels. The sample covers about 0.32% of the Australian civilian population aged 15 years or over. The Labour Force Survey is designed primarily to provide estimates of key labour force statistics for the whole of Australia and, secondarily, for each state and territory.

Two types of error are possible in an estimate based on a sample survey: non-sampling error and sampling error.

Non-sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures. Non-sampling error also arises because information cannot be obtained from all persons selected in the survey. The Labour Force Survey receives a high level of cooperation, with an average response rate for the last year being 94%.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

Standard errors of key estimates and movements since the previous month are available in Labour Force, Australia (cat. no. 6202.0). The standard error of other estimates and movements may be calculated by using the spreadsheet contained in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001).

COHERENCE

The ABS has been conducting the Labour Force Survey each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.

The changes which have been made to the Labour Force Survey have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and

time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the Labour Force Survey see Chapter 20 in Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0.55.001).

INTERPRETABILITY

The key estimates from the Labour Force Survey are available as original, seasonally adjusted and trend series. Seasonal adjustment is a means of removing the effects of normal seasonal variation from the series so other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular influences which may be present and therefore month-to-month movements may not be reliable indicators of underlying behaviour. To assist in interpreting the underlying behaviour, the ABS produces the trend series by smoothing the seasonally adjusted series to reduce the impact of the irregular component. For further information, see A Guide to Interpreting Time Series - Monitoring Trends (cat. no. 1349.0).

Further information on the terminology and other technical aspects associated with statistics from the Labour Force Survey can be found in the publication Labour Force, Australia (cat. no. 6202.0), which contains detailed Explanatory Notes, Standard Error information and a Glossary.

ACCESSIBILITY

Please see the Related Information tab for the list of products that are available from this collection.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

As advised in the October 2014 issue of *Labour Force, Australia* (cat. no. 6202.0), the seasonality of the labour force data has been re-estimated after taking account of the changed pattern of supplementary surveys. This will result in revised seasonally adjusted (and trend) estimates for July, August and September 2014 for all series.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Data relating to unemployed persons and their reason for unemployment is not available from August 2014. As noted in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), spreadsheet Table 18 had been highlighted to be removed from the November 2014 issue. As response categories for this part of the Labour Force Survey questionnaire have changed and the householder is now asked to identify all reasons for unemployment instead of the previously asked main reason, this series is no longer able to be derived on a comparable basis and is therefore not available from the August 2014 issue. Data relating to reasons for unemployment will be included in data

Data Cubes (I-Note) - Data Cubes

Data relating to unemployed persons and their reason for unemployment is not available from August 2014. As noted in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), data cube UQ1 had been highlighted to be removed from the November 2014 issue. As response categories for this part of the Labour Force Survey questionnaire have changed and the householder is now asked to identify all reasons for unemployment instead of the previously asked main reason, this series is no longer able to be derived on a comparable basis and is therefore not available from the August 2014 issue. Data relating to reasons for unemployment will be included in data cubes UQ2(a) and UQ3(a) from the November 2014 issue.

Standard Errors

Estimates from the Labour Force Survey (LFS) are based on information collected from people in a sample of dwellings, rather than the entire population. Hence the estimates produced may differ from those that would have been produced if the entire population had been included in the survey. The most common measure of the likely difference (or 'sampling error') is the **standard error** (SE).

The ABS considers that estimates with a relative standard error of 25% or more may be subject to sampling variability too high for most practical purposes.

To determine if an item has a relative standard error of 25% or more, in SuperTABLE, right click in the centre of the table, select annotate cells - standard annotations, and select 'Annotate RSE cut-off values'.

To indicate those cells in spreadsheets with a relative standard error of 25% or more, annotations have been applied prior to dissemination.

In addition, the tables below have been supplied to show estimates at which the relative standard error is 25%. Estimates of the size indicated in the tables, or smaller, are considered to be subject to sampling variability too high for most practical purposes.

Due to the January 2011 flooding in Queensland the relative standard errors for January will be higher than normal in some regions, therefore for Queensland the estimates at which the relative standard error is 25% will be higher than they appear in the tables below. However from February, the data returns to normal.

The RSEs for July 2013 (50% old sample, 50% new sample) and onwards will be subject to revisions in the future, as more information is known about the new sample after it has been introduced.

Additional information on how standard errors for LFS estimates are produced is available in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001).
